

# SERVICE MANUAL

## STEREO POWER AMPLIFIER

### SANSUI BA-F1

#### SPECIFICATIONS

##### Power output

Min. RMS, both channels driven, from 10 to 20,000 Hz,  
with no more than 0.008 % total harmonic distortion  
110 watts per channel into 8 ohms

Load impedance . . . . . 8 ohms

##### Total harmonic distortion

. . . . . less than 0.008 % at or below  
rated min. RMS power output

Intermodulation distortion (70 Hz : 7 kHz = 4:1 SMPTE  
method) . . . . . less than 0.008 % at or below rated  
min. RMS power output

Rise time . . . . . 0.5  $\mu$ sec

Slew rate . . . . .  $\pm 200$  V/ $\mu$ sec

##### Frequency response (at 1 watt)

. . . . . DC to 600,000 Hz +0 dB -3 dB

##### Damping factor (1 kHz, both channels driven)

. . . . . 100 into 8 ohms

Input sensitivity and impedance (1 kHz, for rated power  
output) . . . . . 1 V/25 kilohms

##### Hum and noise (short-circuit, A-network)

. . . . . better than 125 dB

##### Channel separation (1 kHz, at rated power output)

. . . . . better than 125 dB

##### Power requirements

Power voltage . . . . . 100, 120, 220, 240 V (50/60 Hz)  
For U.S.A. and Canada

. . . . . 120 V (60 Hz)

##### Power consumption

Rated consumption  
. . . . . 470 watts

Dimensions . . . . . 430 mm (16-15/16") W

187 mm (7-3/8") H

430 mm (16-15/16") D

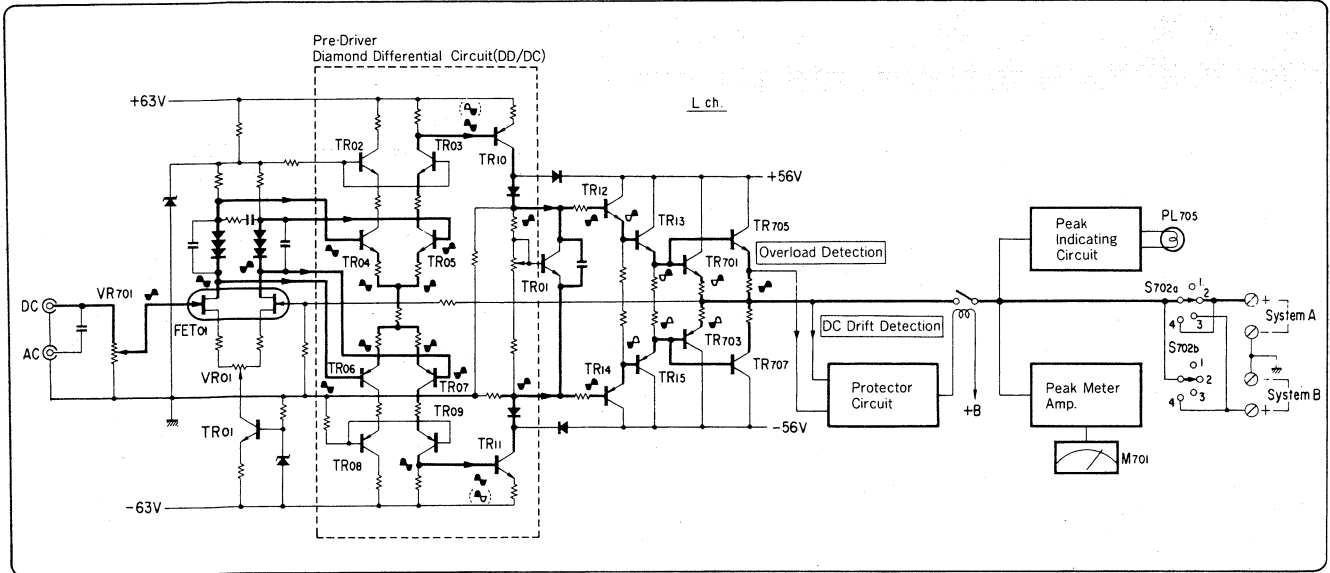

Weight . . . . . 20.4 kg (45.0 lbs) net  
22.8 kg (50.3 lbs) packed

- Design and specifications subject to change without notice for improvements.
- In order to simplify the explanation illustrations may sometimes differ from the originals.

SANSUI ELECTRIC CO., LTD.

## 1. BLOCK DIAGRAM

## 2. OPERATION OF PROTECTOR CIRCUIT

In the protector circuit of BA-F1, IC/HA-12002 is adopted to prevent ① the damage on speakers caused by the DC-drift ② the overcurrent flowing the output stage due to the overload and ③ the pop-noise occurred at switching the power.

The configuration of the protector circuit and the interior schematic diagram of HA-12002 are shown in Figs. 2-1 and 2-2, respectively.

Fig. 2-1 Configuration of protector Circuit

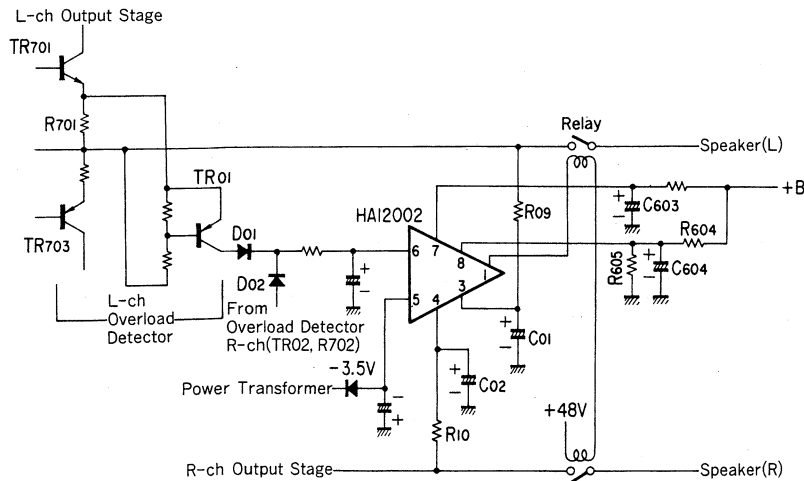

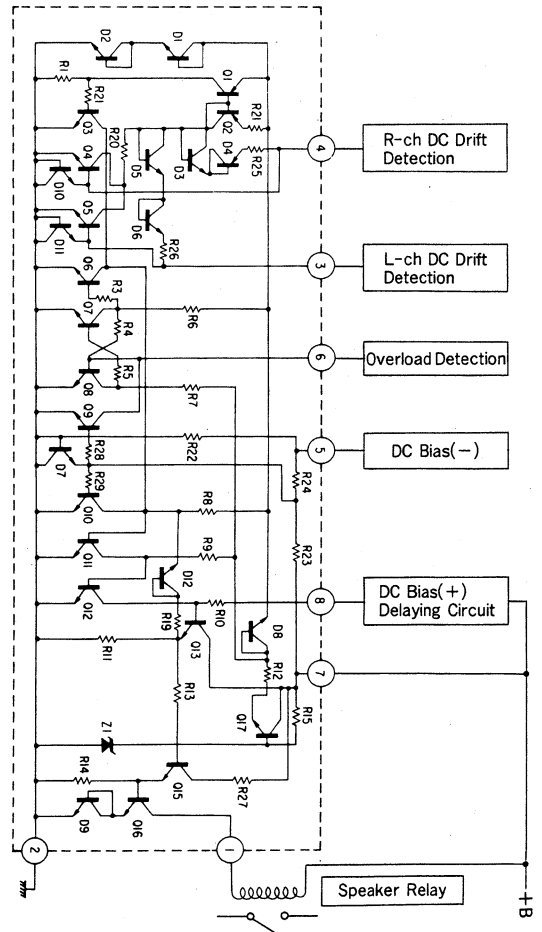

Fig. 2-2 Schematic Diagram of HA-12002

### Protector circuit with IC, HA-12002

This protector IC provides the input terminals for detecting  $\pm$ DC drift, Overload, and pop-noise occurred at switching the power, and output terminal for switching the speaker relay. By the function above, when there are any disorder with amplifier, the output is immediately separated from speaker.

#### \* Prevention against pop-noise at switching the power.

Since the relay remains OFF for a certain period by the time constant of R604, R605 and C604 when power switch is turned ON, the pop-noise can be eliminated. When turning OFF the power switch, the voltage drop of pin No. 5 is faster than that of Pin No. 7, 8, therefore, the speaker relay turns OFF as soon as power is switched OFF. Resultly, the pop-noise occurred at switching the power OFF is eliminated.

#### \* $\pm$ DC drift detection

When DC voltage over +1.6 V or under -1.86 V is applied to pin No. 3 (or No. 4) to be its voltage detected by R09 and C01 (or R10 and C02), the speaker relay is turned OFF.

#### \* Detection against overload

When speaker terminal of amplifier is shorted or over loaded, the excessive current flows into emitter resistor R701 (or R702) of power transistor and makes TR01 (or TR02) ON and if the DC voltage of pin No. 6 rises over +1.4 V by above phenomenon, the relay is turned OFF. The relay is kept OFF in spite of the DC voltage being dropped. In order to reset the relay, it is necessary to turn the power switch OFF.

## 3. ADJUSTMENTS (See Top View on page 5, and Bottom View on page 7.)

Notes: 1. Room Temperature . . . 18°C ~ 28°C  
(65°F ~ 83°F)

2. For this adjustment, run the unit for more than 5 minutes after the power is switched ON with its level volumes minimum.

### 3-1. F-2965, F-2966 DC-0V and Bias Current Adjustment

Note: Before adjusting or confirming the bias current, avoid such a measurement that the power transistors are heated.

STEP	SUBJECT	MEASURE OUTPUT	ADJUST	ADJUST FOR	REMARK
1.	DC-0V (L-CH) Adj.	Voltage between (+) and (-) of Speaker Terminal (L-CH)	VR01 on F-2965	DC 0V $\pm$ 10 mV	Before turning ON power switch, set VR01 to center position in case of replacing F-2965 or F-2966.
2.	DC-0V (R-CH) Adj.	Voltage between (+) and (-) of Speaker Terminal (R-CH)	VR01 on F-2966		
3.	Bias Current (L-CH) Adj.	Voltage between emitters of TR705 and TR707 (See Fig. 3-1.)	VR02 on F-2965	DC 20 mV $\pm$ 2 mV	Before turning ON power switch, turn VR02 fully counterclockwise in case of replacing F-2965, or F-2966. In this adjustment, the bias current is converted into the voltage.
4.	Bias Current (R-CH) Adj.	Voltage between emitters of TR706 and TR708 (See Fig. 3-1.)	VR02 on F-2966		

### 3-2. F-2964 Peak Meter Level Adjustment and Lighting Level Adjustment on Peak Indicator

SETTING	STEP	SUBJECT	ADJUST	ADJUST FOR
1. Set level volumes of the unit maximum. 2. Feed 1 kHz sine-wave signal from audio oscillator to input terminals, L and R of the unit. 3. Set the output voltage of the unit 29.7V to adjust the output of oscillator.	1.	Peak meter level Adj. (L-CH)	VR01 on F-2964	Set the pointer of peak meter to 0 dB. 
	2.	Peak meter level Adj. (R-CH)	VR02 on F-2964	
	3.	Lighting level Adj. on peak indicator (L-CH)	VR03 on F-2964	Set VR03 and VR04 to the position where the peak indicator begins to light. Confirm that peak indicators become luminous at 0 dB $\pm$ 1 dB of the peak meter indication by varying the output of oscillator.
	4.	Lighting level Adj. on peak indicator (R-CH)	VR04 on F-2964	

Fig. 3-1 Bottom View of Heat Sink

\* Power transistors of each channel are arranged as shown in this fig.

\* Be careful not to touch a collector terminal (C) with (-) probe in case of measuring the voltage between emitter terminals (E).

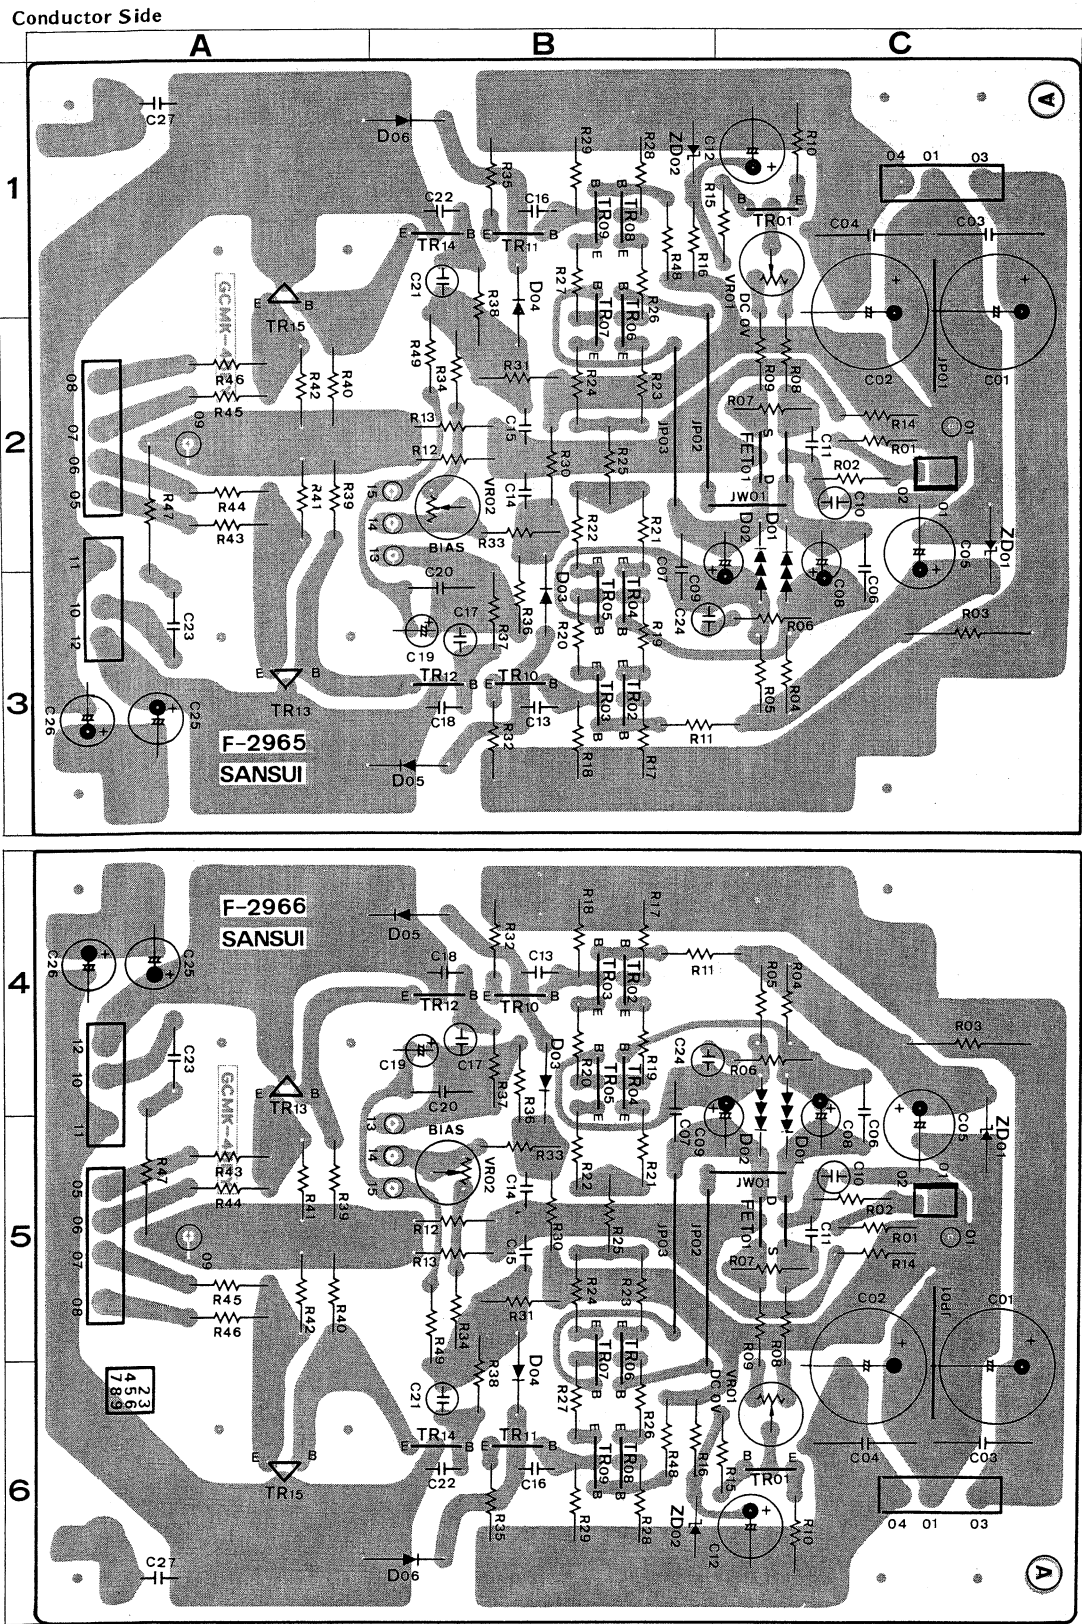

# 4. PARTS LOCATION & PARTS LIST

- 4-1. F-2965 Driver Amp. Circuit Board L-CH (Stock No. 7572271)  
F-2966 Driver Amp. Circuit Board R-CH (Stock No. 7572281)

Since some of capacitors and resistors are omitted from parts lists in this Service Manual, refer to the Common Parts List for capacitors & resistors which was appended previously to each Sansui Manual.

## 7. OTHER PARTS

### 7-1. Front View

## 5. MAIN PARTS REPLACEMENT

### 5-1. Peak Meter Replacement

(See Figs. 5-1 and 7-2, Top View)

- Pluck out connectors which join the peak meter to F-2964.
- Remove 2 screws (A) shown in 7-2, Top View, and take off the peak meter together with the meter mounting board.
- Remove 2 screws (B) fixing lamp mounting board to peak meter.
- Remove 2 screws (C) fixing the peak meter to the meter mounting frame that the peakmeter can be taken off.

### 5-2. Peak Indicator Lamp Replacement

- Remove the lamp mounting board, following to procedures 1 ~ 3 of 5-1.
- Pull out the lamp from the lamp mounting board.

### 5-3. Meter Illumination Lamp Replacement

(See Fig. 5-1)

- Take off the peak meter together with the meter mounting frame, following to procedures 1 ~ 2 of 5-1.
- Disconnect wires of the meter illumination lamp, soldered on the lamp mounting board.
- Remove 2 screws (D) fixing the illumination plate to the meter mounting board, and take off the illumination plate together with the meter illumination lamp.
- Pull out the lamp from the illumination plate and insert a replacement lamp.

### 5-4. Power Indicator Lamp Replacement

- Take off front panel to remove 4 screws fixing the front panel to chassis.
- Pluck out power switch knob.
- Pull out the lamp from lamp fixing board and insert a replacement lamp.

### 5-5. Replacement of Parts on F-2963

- For F-2963, parts replacement can be easily made after removing F-2964, Protector & Meter Amp. Circuit Board.

Fig. 5-1

### 7-2. Top View

## 6. NOTE WHEN HANDLING POWER TRANSISTORS

For power transistors NMA1012 and NMC1012, the glass seal between emitter (or base) lead and metal header (collector) might be cracked, if the emitter (or base) lead is bended or shocked.
